

CARLA BECKER  
PERMANENT MAKE-UP

## WHAT IS PERMANENT MAKE-UP?

Permanent make-up is a process where colour is inserted into the dermal layer of the skin using fine needles dipped in hypo-allergenic pigment. Pigments are derived from vegetable products and are either premixed or mixed manually, creating a broad palette from which to choose. The pigment bonds to the cells and is visible through the translucent outer layer. Permanent Make-Up is only a semi-permanent procedure, that lasts 12-36 months depending on a specific area.

## WHO CANNOT GET PERMANENT MAKE-UP?

- Pregnant or nursing
- Diabetic (consult your doctor)
- Undergoing chemotherapy (consult your doctor)
- Viral infections/or diseases
- Epilepsy
- Had an organ transplant
- Skin irritations on the specific area (sunburn, psoriasis, eczema, acne etc)
- Cold or Flu
- Had botox in the past 4 weeks
- Used Accutane in the last 6 months

## IS IT PAINFUL?

Most people experience some discomfort. This may vary according to each individual's pain threshold. Different methods are available to help pain management, including various topical anesthetic ointments. It is not the same as a body tattoo.

# PRICELIST

Unfortunately Carla does not only work on other artists work before consulted. You will first need to inform her and schedule a free consultation. She will then be able to advise if she will be able to proceed. Full price will be charged like any other new client if you have done permanent make-up with any other artist. Please note: There may be a follow up procedure between 8-12 weeks if it's the first procedure with Carla. Touch-Up procedures are NOT included in the first procedure. Please view touch-up prices.
